

AN7164

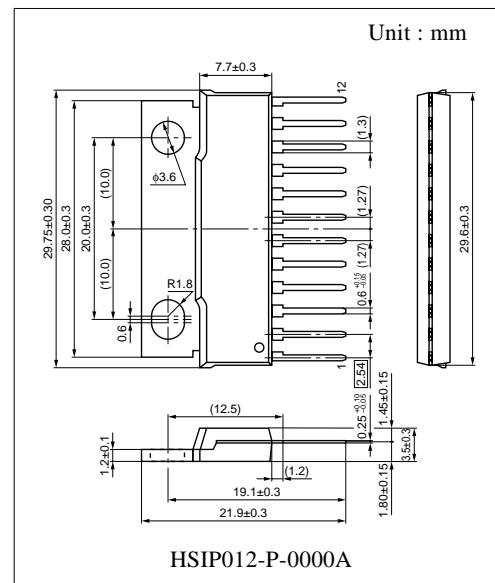

30 W BTL audio power amplifier

■ Overview

The AN7164 is an integrated circuit designed for 30 W ($V_{CC} = 21$ V, 8Ω) output power amplifier. High power output (BTL 30 W), low distortion and low noise are realized. High reliability is obtained due to various kinds of protectors built in. Furthermore, on-off of output is possible from standby terminal.

■ Features

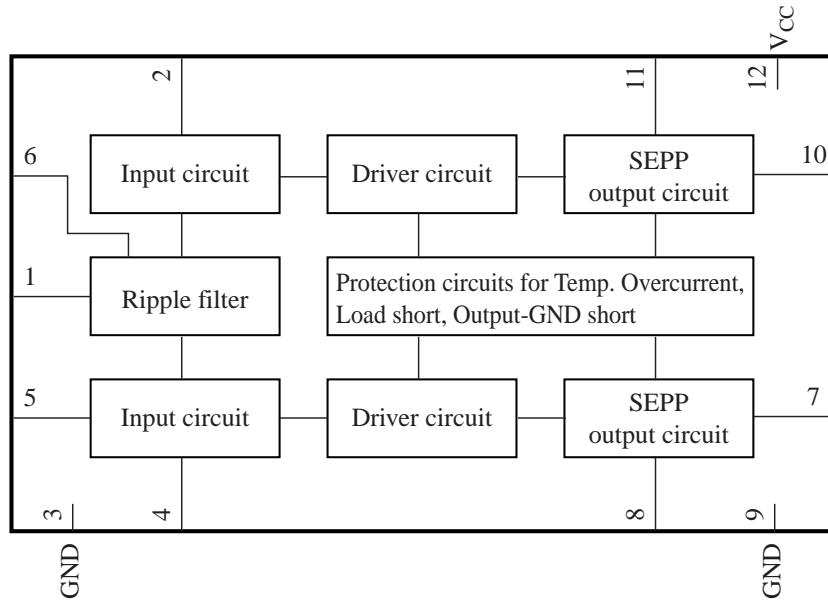

- High power output
- Low distortion, Low noise
- Low shock noise when power supply is turned-on, off
- Built-in standby function
- Built-in protection circuits
(Temperature, Overcurrent, Load short circuit, Output - GND short circuit)

■ Applications

- Stereo, Karaoke, TV

■ Usage Notes

Standby-on (i.e. an application of 5 V to pin 6) under a high temperature may cause no-output due to the malfunction of rapid discharging circuit of the ripple filter. To avoid this, it is necessary to forcibly flow a current of 1 mA into pin 1 at standby-on.
