

# High Performance 2048x8 PROM TiW PROM Family

**53/63S1681  
53/63S1681A**

**3**

## Features/Benefits

- 35-ns maximum access time
- 16384-bit memory
- Reliable titanium-tungsten fuses (TiW)
- Available in space saving SKINNYDIP® package

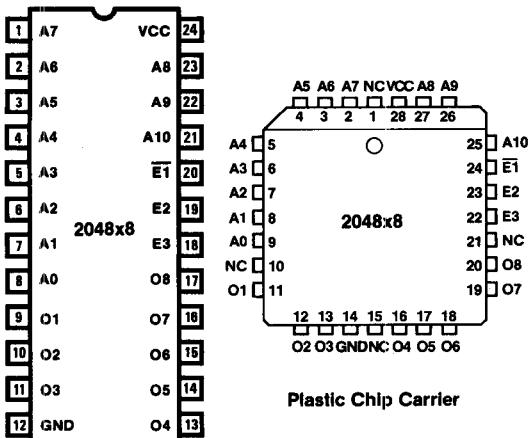

## Applications

- Microprogram control stores
- Microprocessor program store
- Look-up table
- Character generator
- Code converter
- Programmable Logic Element (PLE™) 11 inputs, 8 outputs, 2048 product terms

## Pin Configurations

## Description

The 53/63S1681 is a high-speed 2Kx8 PROM which uses industry standard package and pin out. In addition, the device is available in the 24-pin (0.3 in.) SKINNYDIP®.

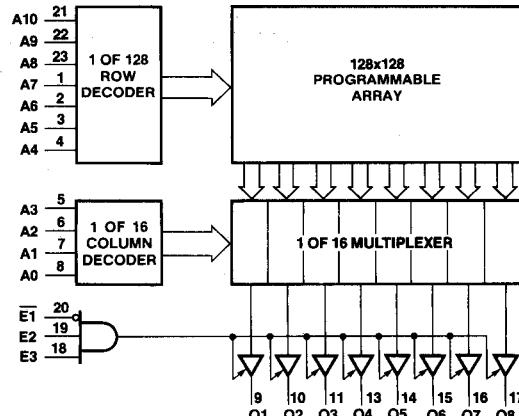

The family features low current PNP inputs, full Schottky clamping and three-state outputs. The Titanium-Tungsten fuses store a logical low and are programmed to the high state. Special on-chip circuitry and extra fuses provide preprogramming tests which assure high programming yields and high reliability.

The 63 series is specified for operation over the commercial temperature and voltage range. The 53 series is specified for the military ranges.

## Programming

The 53/63S1681 PROM is programmed with the same programming algorithm as all other Monolithic Memories' generic TiW PROMs. For details contact the factory.
